

Shadow Server Disaster Recovery and Business Continuity Solution

SOLUTION brief

Data-Tech's Shadow Server provides Immediate Server Recovery with Co-Location Options

Shadow Recovery Servers are Virtual Host Servers that store dark or offline virtual images of servers for near instant recovery of a failure. Designed to be a cost effective solution for Business Continuity.

Shadow Protect software is used to make full image backups of servers and replicate those images to Shadow Recovery Servers for near instant recovery.

Get your Disaster Recovery Plan started today with Shadow Protect
